Compliance

Build compliant data environments that accelerate innovation

evolv + snowflake

Your data platform is expanding, but compliance can't keep up. Overlapping regulations, manual audits, and fragmented systems increase the risk of fines and breaches. You need a defensible, auditable platform that protects sensitive data without slowing the business.

What's holding you back

- No continuous monitoring – issues surface only at audit time
- Manual access control and inconsistent process-to-policy mapping
- Limited tagging, classification, and centralized audit trails
- Misaligned compliance frameworks and siloed governance

What success looks like

- Automated access controls, encryption, and tagging across Snowflake
- End-to-end audit trails and faster certifications
- Continuous compliance monitoring and reporting
- Secure, compliant data sharing across teams and partners
- Reduced audit effort and risk exposure

How evolv helps

evolv **embeds compliance** into the foundation of your Snowflake environment.

We **automate access controls**, tagging, and audit trails to meet HIPAA, PCI, SOX, and GDPR standards.

We make compliance a proactive advantage – teams **move fast, stay secure, and pass audits** with confidence.

Why evolv?

- **We build for trust.** Secure, compliant data platforms that scale
- **We embed governance.** Automated policy enforcement and audit readiness
- **We drive alignment.** Legal, risk, and engineering teams working as one
- **We deliver outcomes.** Fewer audit findings, faster certifications, and safer data
