

Cost Optimization

Turn cloud cost chaos into financial clarity

Your cloud data platform delivers insights, but also unpredictable costs. Spend keeps rising without clear ties to business value, idle compute runs nonstop, and finance is left explaining overruns. You need a governed, predictable model that aligns cost with outcomes.

What's holding you back

- No proactive cost detection or forecasting
- Idle compute and oversized warehouses
- Limited tagging, chargeback, and unified reporting
- Cold data stored in expensive tiers
- Overspend discovered too late

What success looks like

- › Idle compute eliminated and workloads right-sized
- › Forecast accuracy within 10% variance
- › Real-time visibility into storage and compute costs
- › Budget-based alerts and utilization tied to outcomes
- › Maintained performance with lower spend

How evolv helps

evolv brings **financial discipline** to your Snowflake environment.

We automate suspend/resume logic, enforce tagging standards, and enable real-time monitoring to **eliminate waste**.

Our strategies align IT, finance, and data teams, so every dollar drives **business value**.

Why evolv?

- **We build for efficiency.** Right-sizing, automation, and cost governance baked in
- **We embed visibility.** Monitoring tools and tagging standards for full transparency
- **We drive alignment.** Finance and IT working from the same playbook
- **We deliver outcomes.** Predictable budgets, reduced waste, and sustained performance
