

Data Security

Protecting information without slowing innovation

Your data is growing and so is the risk. Sensitive information is scattered across environments, roles, and tools while compliance demands continue to rise. evolv helps you protect what matters and make Snowflake secure by design.

What's holding you back

- Inconsistent policies and poor integration across systems, IAM, and DLP tools
- Weak access controls, key management, and limited visibility into user activity
- Overly restrictive measures that slow productivity and break dashboards
- Security treated as a one-time effort without executive alignment

What success looks like

- › 100% of data classified by sensitivity
- › Enterprise SSO with MFA for all users
- › Automated dashboards for monitoring and anomaly detection
- › Reduced unauthorized access and audit findings
- › Faster, compliant access provisioning across roles and environments

How evolv helps

evolv **secures your Snowflake environment** with fine-grained controls, masking, encryption, and automated classification.

We integrate with IAM, DLP, and SIEM tools to **enforce consistent policies** and **enable safe data sharing**.

Our approach balances protection with performance, so your teams **stay productive and compliant**.

Why evolv?

- **We build for trust.** Security that protects without slowing down
- **We embed governance.** Automated classification, monitoring, and audit trails
- **We drive alignment.** Business-first policies that scale across teams
- **We deliver outcomes.** Fewer breaches, faster access, and stronger compliance posture
