

ERP & CRM Integration

Turn Complexity into Clarity

You're flying blind. Enterprise Resource Planning (ERP) and CRM data is scattered, so no one trusts the numbers. Decisions stall. Revenue slips. Reporting drags. Teams react instead of lead. The cost? Lost growth, lost time, and a widening gap you can't afford.

What's holding you back

- Data structure mismatches across systems
- Siloed business practices and duplicate tools
- Manual work to align financials
- Lack of access controls and governance
- Technical debt from brittle integrations
- Low trust in data, low adoption of AI/ML

What success looks like

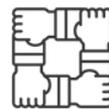

When ERP and CRM data flows seamlessly, everything changes.

- › 60–80% of knowledge workers using consolidated data
- › 25–40% boost in cross-sell revenue
- › 15–20% win rate improvement
- › 95% KPI accuracy across departments
- › Real-time decision-making
- › 30–40% reduction in operational costs
- › 70–80% fewer data security incidents

How evolV helps

We build governed, scalable pipelines across ERP & CRM sources, standardize data for downstream use, and enable real-time access and automation.

We reduce reporting overhead, accelerate post-acquisition onboarding, and **drive adoption of Snowflake and GenAI** by making data trustworthy.

The result? Faster decisions, better performance, and **a business that finally runs on facts, not friction.**

Why evolV?

- **Proven playbooks** for ERP/CRM integration
- **Deep Snowflake expertise**
- **Cross-functional alignment** between IT and business
- **Trusted by enterprise leaders** to unlock data value – fast
- **We don't sell platforms – we deliver outcomes**
