

ETL/ELT & Pipelines

From Data Chaos to Confident Decisions

Your data is everywhere but your decisions are not. Legacy ETL is brittle, slow, and hard-coded. Dashboards break. Trust erodes. The business is stuck waiting. evolv helps you modernize how data moves, transforms, and delivers so **insights arrive clean, fast, and ready to use.**

What's holding you back

- Tool fragmentation & vendor lock-in
- Performance bottlenecks & fragile workflows
- Poor data quality & low trust
- Overcomplicated orchestration & monolithic architecture
- No governance, audit trail, visibility
- “We automated bad data faster – we just made bigger problems sooner”

What success looks like

- Reliable, fast data delivery with defined SLAs
 - 95% accuracy and completeness in business-critical fields
- Automated error tracking and monitoring
- Standardized cleansing and quality functions
- Scalable architecture aligned with governance
- Trusted data powering BI, analytics, and AI

How evolv helps

evolv replaces brittle ETL with scalable, governed pipelines that **deliver trusted data – fast.**

We embed quality frameworks, align architecture with business logic, and build monitoring that **catch issues before they hit production.**

Our teams turn raw data into reliable insight, **ready for decision-making and future AI innovation.**

Why evolv?

- **evolv delivers modern ETL/ELT pipelines** powered by governance, automation, and scalable architecture.
- We embed monitoring, error tracking, and quality from day one – so **your data flows clean, fast, and with confidence.**
- **Our teams bring deep experience** across orchestration tools (e.g. Snowflake & dbt).
