

# Legacy Warehouse Migrations

## From Lift-and-Shift to Business Breakthroughs

You've outgrown your legacy warehouse, but your migration is stuck in neutral. Costs are rising, adoption is low, and the business doesn't trust the data. evolv helps you modernize with purpose. A successful migration isn't about moving data – it's about moving the business forward.

### What's holding you back

- High cost & poor scalability
- Inflexible architecture blocking AI/ML and Business Intelligence
- Shrinking talent pool & operational risk
- Low adoption & trust post-migration
- Unpredictable cloud costs & weak governance
- "We built the platform, but no one's using it"

### What success looks like

- Faster insights and lower costs
- High business adoption and trust
- Real-time streaming replaces batch
- Scalable, elastic compute for peak demand
- Confidence in data quality and governance
- Agility to support innovation and growth

### How evolv helps

evolv transforms legacy migrations into **strategic modernization**.

We deliver phased roadmaps, embed governance, and align cross-functional teams to **ensure your new platform drives real business outcomes** – not just technical cutover.

We help you shift from dashboards that lag to data that leads – so **your migration pays off in speed, trust, and measurable ROI**.

### Why evolv?

- **Strategic roadmap and phased delivery**, not just lift-and-shift
- **Modernization mindset that aligns business and IT**
- **Embedded governance and quality frameworks from day one**
- **Deep experience** across Snowflake, AWS, Azure, and cloud-native platforms
- **Focused on adoption, agility, and business impact** – not just infrastructure
