

Manufacturing Control Tower

From blind spots to breakthroughs in manufacturing

You're drowning in dashboards but can't see what's driving performance. Data is scattered, KPIs are inconsistent, and teams are stuck reacting instead of improving. IT is overwhelmed, frontline teams don't trust the data, and leadership can't see what's working – or why it's not.

What's holding you back

- Disconnected systems mean no unified view of operations.
- Inconsistent KPI definitions make regional comparisons meaningless.
- No root-cause transparency, just trend lines with no "why."
- Improvement initiatives lack ROI clarity and can't scale.

What success looks like

- › 5-10% Overall Equipment Effectiveness (OEE) lift across plants.
- › Faster detection-to-resolution for production anomalies.
- › Standard KPIs and performance logic across the region.
- › Control Tower insights embedded in daily ops reviews.
- › Frontline teams empowered with self-service and alerts.

How evol helps

evol **unifies your manufacturing data** into a single, trusted source of truth.

We embed root-cause analytics directly into daily operations – **no more guesswork.**

We align plant, IT, and leadership teams around **measurable performance gains.**

Why evol?

- **We build for visibility.** Integrated data models that unify Manufacturing Execution system (MES), Enterprise Resource Planning (ERP), and plant systems
- **We embed intelligence.** Root-cause analytics and anomaly detection built into daily operations
- **We drive consistency.** Standardized KPIs and shared logic across every site and region
- **We deliver outcomes.** Higher OEE, faster issue resolution, and cost savings
