Snowflake Cortex Analyst

Analytics That Keep Up With the Business.

Your data team is buried in ad-hoc requests. Business users are stuck waiting, or worse, guessing. Dashboards don't cover every question, and Structured Query Language (SQL) isn't scalable. evolv helps you deploy Cortex Analyst to deliver fast, accurate answers from structured data without friction.

What's holding you back

- Immature semantic models and mismatched business terms
- No lineage, no validation, no way to know if it's right
- Low adoption, as users stick to old tools
- No prompt engineering expertise – and bad data still leads to bad answers
- "I don't know what this answer means – and I don't know how to check it"

What success looks like

- Quantified time savings for data engineering teams
- Verified queries and user feedback loops
- Semantic models that match how business users think
- Filters and data models that work together
- Governance and change management embedded from day one
- Frictionless access to fresh, trusted data

How evolv helps

evolv helps teams operationalize Cortex Analyst to **deliver analyst-grade insights at scale**.

We build semantic models that bridge business and technical language, embed governance, and **drive adoption through training and change management**.

We don't just enable text-to-SQL – we make it **accurate, explainable, and ready for business**.

Why evolv?

- **We make answers make sense.** Semantic models built with your teams, not in a vacuum.
- **We embed trust.** Governance, validation, and adoption from day one.
- **We deliver outcomes.** Time saved. Tickets down. Users satisfied.
- **We make Snowflake and Cortex work.** No fluff. No sprawl. Just results.
