

# Supply Chain Risk Assessment & Optimization

What can you stand to risk in your supply chain?

Your supply chain is exposed. Tariffs, weather, geopolitical shifts, and supplier disruptions hit hard – and your data can't keep up. You're reacting after the damage is done, not before.

## What's holding you back

- Data isn't real-time or reliable
- Insights are unclear and slow to surface
- Departments aren't aligned – finance, marketing, and supply chain pull in different directions
- Over-reliance on sole-sourced suppliers with no backup plan

## What success looks like

- › A supply network that flexes with external conditions
- › Cost optimization and efficient inventory management
- › Clear visibility across the supply chain
- › Decisions made before disruption hits, not after

## How evolv helps

evolv assesses your current supply chain risk posture and builds a strategy that is **agile, data-driven, and resilient.**

Our Team aligns business and IT, connects siloed data, and **delivers visibility that drives action.**

We don't just optimize - **we future-proof.**

## Why evolv?

- **We build for agility.** Architectures that flex with the market.
- **We embed transparency.** Data sharing that builds trust across your supply base
- **We drive alignment.** Cross-functional strategies that eliminate internal friction
- **We deliver confidence.** Decisions made with clarity, before critical mass hits
