Break free from Black-Box AML and Fraud Tools

Legacy Anti-Money Laundering (AML) and fraud platforms are expensive, opaque, and slow to adapt. Their black-box models generate high alert volumes, false positives, and regulatory headaches – all while draining budgets and analyst capacity.

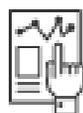

What's holding you back

- Off-The-Shelf (OTS) tools cost too much and deliver too little
- Models are rigid, outdated, and unexplainable
- No integration means missed context
- False positives bury your analysts

What success looks like

- › Lower total cost of ownership with a custom or semi-custom solution
- › Sharper detection tuned to your products, customers, and risk profiles
- › Explainable models that regulators trust and your teams can evolve
- › Scalable automation that accelerates investigations and reduces analyst load

How evolv helps

evolv designs AML and fraud **solutions that fit your data**, not the other way around.

We embed AI-driven detection and automation that **evolves with emerging threats**.

We **align compliance, data, and engineering teams** around a shared, explainable model.

Why evolv?

- **We build for agility.** Customizable models that evolve with your risk landscape
- **We embed intelligence.** AI-powered detection and automation that scales
- **We drive transparency.** Explainable logic your teams and regulators can trust
- **We deliver outcomes.** Lower Total Cost of Ownership (TCO), fewer false positives, and faster case resolution
