

AI-Powered Migration. Fixed Cost. Trusted Outcomes.

Lower costs by **30%** and get results fast, leveraging Cortex Code

Data migrations fail because they're treated as open-ended IT projects rather than bounded business transformations. Using our AI Innovation Lab, powered by Cortex Code, evolv reduces reconciliation cycles and defect triage time by **up to 60%**, resulting in approximately **30% lower migration costs**.

What's holding you back

- IT and business misaligned on scope and priorities
- No clear definition of "done" or success criteria
- Paying for old infrastructure while migration drags on
- Technical debt and fragile architecture block cloud adoption
- Data silos, poor lineage, and quality incidents post-migration

What success looks like

- › Migration delivered on-time, on-budget with fixed pricing
- › Developers upskilled on new platforms during delivery
- › Reduced data quality incidents through automated testing
- › Business teams making faster decisions on scalable infrastructure

How evolv helps

Leverages Cortex Code AI automation to accelerate code conversion and reduce manual migration effort (up to 60%)

Defines clear success criteria and scope boundaries upfront with executive sponsors and technical teams

Embeds change management, testing, and governance throughout delivery – not bolted on after

Why evolv?

- **Experience delivering fixed-fee** migrations with AI-powered automation
- **Proprietary frameworks** ensuring repeatable, low-risk delivery patterns
- **Governance and lineage built in** from day one, not retrofitted
- **Strong focus on upskilling teams** and enabling adoption during migration
- **Track record** turning runaway IT projects into bounded business outcomes
