

# Bring Compliance Into the Future: Automated, Auditable, Always Regulator-Ready

Unify transactions, gameplay signals, and risk indicators into a single governed source

Regulatory reports are compiled from siloed systems across regions and operators, creating manual effort, slow turnaround, and audit risk. Each regulator mandates distinct formats, lineage is poor, and proving data origin is painful without unified governance.

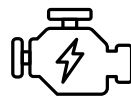

## What's holding you back

- Rules hard-coded, not modular
- Missing or weak data lineage
- Poorly implemented governance (masking, RBAC)
- Incomplete ingestion leading to gaps
- Dashboards built without validation

## What success looks like

- › Regulatory reports generated automatically
- › Compliance teams shift to proactive
- › Findings and exceptions drop significantly
- › Operators and regulators gain trust
- › Compliance costs decrease
- › Scale into new jurisdictions faster

## How evolV helps

**Implements modular rule engine** with parameterized logic for jurisdiction changes

**Captures end-to-end lineage** from raw source to report output with immutable snapshots

**Enforces governance from day one** with PII masking, RBAC, and quality assurance for compliance data

## Why evolV?

- **Regulatory** compliance automation expertise across jurisdictions
- **Proven** lineage and governance frameworks regulators trust
- **Deep** gaming domain experience with RG, AML, and fairness reporting
- **Ability to scale** multi-market compliance efficiently
