

Always Audit-Ready. Built to Scale.

Centralize compliance data and automate audit evidence preparation

Compliance data is scattered across systems with no consistent metadata. Regulatory requirements are tied to filings, customer data, and legal workflows across jurisdictions. As the business scales, manual tracking and audit prep become time-consuming, error-prone, and hard to govern.

What's holding you back

- Compliance data scattered without consistent metadata
- Audit requests disrupt engineering and data teams
- Rules hard-coded instead of modular
- Security controls hard to enforce consistently
- Compliance work slows initiatives

What success looks like

- › Centralized, trusted compliance data mart
- › Clear mapping between requirements and controls
- › Automated audit-ready evidence packs
- › Reduced audit prep time
- › Improved visibility into coverage and gaps

How evolV helps

Creates governed compliance data mart with standardized metadata classifying controls, policies, and filings

Implements secure, role-based access aligned to zero-trust principles

Automates evidence generation with phased rollout and legal validation through advisory council

Why evolV?

- **Regulatory** data centralization expertise
- **Proven** audit automation frameworks
- **Strong** governance and access control design
- **Experience** aligning compliance, audit, and data teams
