

Modern Operational Intelligence

Correlate telemetry and transaction data to detect incidents faster and reduce revenue impact

Operational issues across payment rails are detected late, limiting visibility into business impact. Telemetry is disconnected from transactions, response is reactive, and leaders lack a unified operational model linking degradation to financial consequences.

What's holding you back

- Telemetry disconnected from transactions
- Reactive response to incidents
- No unified operational model
- Manual triage slowing resolution
- Limited executive visibility into impact

What success looks like

- › Reduced mean time to resolution (MTTR)
- › Faster incident detection
- › Lower revenue leakage during outages
- › Improved customer experience
- › Clear visibility into corridor-level impact

How evolV helps

Integrates telemetry and transaction data into unified model with real-time anomaly detection

Surfaces executive dashboards linking operational degradation to revenue impact

Automates alerts with clear root-cause isolation and response workflows

Why evolV?

- **Operational intelligence** expertise for high-volume platforms
- **Real-time** correlation frameworks reducing MTTR
- **Transparent** incident models operations teams trust
- **Experience** aligning IT, operations, and business teams
