

# Scale Compliance with Confidence

Risk intelligence that reduces review effort while strengthening regulatory trust

Compliance data is spread across surveillance tools, communication platforms, and case systems. Alert volumes overwhelm reviewers, false positives waste time, and fragmented trails undermine regulatory confidence. Compliance costs rise faster than advisor count.

## What's holding you back

- Compliance data siloed across surveillance tools
- Can't prioritize alerts by risk and context
- False positives frustrate reviewers
- Weak lineage undermines regulatory exams
- Reviews slow advisor activity

## What success looks like

- › Alerts prioritized by risk using unified data
- › Review cycle times decrease materially
- › False positives reduced significantly
- › Audit evidence centralized and explainable
- › Regulatory exams faster and more predictable

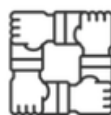

## How evolv helps

Integrates compliance signals in a **governed Snowflake foundation** across surveillance, communications, and cases

Provides explainable, rules-based risk scoring compliance and **regulators trust**

Implements **strong lineage and auditability** through Compliance, IT, and Risk collaboration

## Why evolv?

- **Proven** frameworks for regulatory defense and transparency
- **Deep** compliance and data workflow alignment experience
- **Transparent** models that scale supervision efficiently
- **Track record** reducing false positives and rebuilding trust
