

Modernize Regulatory Reporting

Automate reconciliations and disclosures with governed data and built-in audit traceability

Manual reconciliations across fund accounting, compliance, and reporting systems increase regulatory risk, reporting cost, and operational burden. Reporting cycles are long, audit lineage is limited, and leaders lack confidence in accuracy.

What's holding you back

- Multiple reporting systems and formats
- Manual reconciliations and exception handling
- Limited audit lineage visibility
- High compliance workload
- Risk of reporting inconsistencies

What success looks like

- › Reduced reporting cycle time
- › Lower compliance cost
- › Improved audit readiness
- › Fewer regulatory exceptions
- › Confident, accurate disclosures

How evolV helps

Establishes governed enterprise data model with automated reconciliation workflows

Provides built-in lineage and traceability ensuring audit-ready evidence

Aligns compliance stakeholders around shared standards and reporting logic

Why evolV?

- **Regulatory** reporting modernization expertise
- **Deep** understanding of regulatory expectations
- **Proven** acceleration of reporting delivery
- **Transparent**, platform-agnostic approach
