

# Software Engineering and Cloud Solutions Use Cases

evolv

Modern Platforms Built Faster – Designed to Scale and Adapt with Confidence

Cloud and software investments are meant to increase speed and flexibility. Instead, you face operational risk, technical debt, and platforms that struggle to scale and adapt.

## What's holding you back

- Fragmented architecture and inconsistent engineering standards
- Cloud costs rising without clear performance or business returns
- Technical debt that compounds with every release
- Platforms built for delivery speed, not long-term scale
- Limited automation across environments and pipelines

## What success looks like

- › Scalable, resilient platforms that evolve with business needs
- › Cloud costs aligned to performance and business value
- › Faster, more predictable releases across teams and environments
- › Low operational risk and technical debt
- › Automation embedded across environments to enable consistent, repeatable delivery

## How evolv helps

**evolv helps customers build** scalable, secure cloud and software platforms from day one

**Optimize cloud and software platforms** for performance, cost, and long-term sustainability

**Enable faster, more predictable delivery** across teams and environments

## Why evolv?

- **Deep expertise across cloud platforms** and modern software engineering
- **Proven discovery-first delivery model** that reduces risk and rework
- **Focus on real adoption** and long-term platform sustainability
- **Treat end users as customers** – listening to their needs and designing platforms that solve real problems.
