

AI-Ready Starts with a Well-Architected Framework

Architect Snowflake for Scalable Data and AI Innovation

Organizations that accelerate Snowflake adoption without architectural foundations, create governance gaps, security vulnerabilities, and cost overruns. Teams lack guiding principles and reusable patterns to scale. Business leaders need proven frameworks for governance, security, operations, and performance optimization to unlock data and AI innovation at scale.

What's holding you back

- **Technology:** Fragmented architectures without standardized governance, security, and performance best practices create operational complexity that slows deployment and delays ROI.
- **Business:** Absence of foundational frameworks and an organizational structure aligned to business goals is delaying access to trusted data, slowing insights, and limiting business impact.

What success looks like

- › **Clear direction and momentum:** A well-defined operating model, standards, architectural framework, and enablement that accelerate teams to deliver value.
- › **Trust and accountability embedded:** Strong governance foundations, with clear ownership, and stewardship for organizational alignment.
- › **Transparency to drive smarter decisions:** Visibility into cost, usage, and value that empowers leaders to prioritize investments, optimize spend, and identify business outcomes.
- › **Future-ready foundation for growth:** An adaptable, resilient data ecosystem supported by proven frameworks and guidance, enabling teams to scale trusted data products and respond quickly to evolving business needs.

How evolv helps

Align foundations and remove blockers that establish governance, architectural framework, and operating model aligned to business goals to accelerate execution.

Build trust and enable value-driven decisions: Define ownership and provide transparency into data, cost, and usage so leaders can confidently optimize outcomes.

Drive adoption and long-term independence: Lead change management with role-based training and enablement so teams adopt, scale, and sustain new capabilities.

Why evolv?

- **Align strategy to outcomes:** We remove blockers by aligning governance, operating models, and execution to business goals.
- **Turn data into trusted value:** We build ownership, trust, and visibility to maximize the impact of your data and AI investments.
- **Ensure adoption that lasts:** We embed change management and enablement so teams confidently adopt and sustain new capabilities
